\* Applicant's attorney pointed out that Effing teaches the decreased in stability using non-acidic hydroxyl monomer, such as the 2-hydroxyethyl acrylate. However, it appears that the stability test showed by Effing is directed to only tropisetron compound, not granisetron (the claimed compound). It is also not clear at this point that the present specification uses what specific non-acidic monomer to obtain the stability that <sup>is</sup> unexpected. Any Declaration or amendments submitted after final may not be entered if they do not place the application in condition for allowance.
